> Performance

The popular TAA-101 has been improved! The TAA-101S has been designed to perform flawlessly in harsh conditions. This sealed actuator prevents ingress of dust, water, and debris.

The actuator is skid mounted (or can be fixed to the belly of the aircraft) and accepts an omnidirectional antenna that provides 360° of azimuth coverage.

The unit comes standard with breakaway release mechanisms to assure safety if the helicopter lands with the antenna in the deployed mode. Further, a safety wire prevents it from dropping off should the breakaway safety feature activate.

This system can be used with analog or digital microwave transmit systems such as a BMT75/85 Series Transmitter or the Heli-Coder System.
