models shown)

TAA-101 Antenna Actuator  
shown with BMA-6-O antenna

#### > Overview

This dependable low cost antenna is skid mounted (or can be fixed to the belly of the aircraft) and employs an omnidirectional antenna that provides 360° of azimuth coverage. The unit comes standard with breakaway release mechanisms to assure safety in case the helicopter lands with the antenna still down in the deployed mode. A safety wire prevents it from dropping off should the breakaway safety feature be used.

This system can be analog when equipped with a BMT75/85 Series Transmitter or digital when equipped with a Heli-Coder System.
